

AQUALINE

AQTR110B

Product Description

The Aqualine Trent Gully \varnothing 110mm Bottom Outlet is ideal for use against walls to collect sink and condense waste, offering a modern alternative for pot or clay road gullies.

Designed to be durable and slip resistant, this gully provides an ideal solution for environments that require high standards of cleanliness.

Featuring a water trap, stainless steel plate and slotted cover and offering rodding access for easy cleaning.

This product is available in a range of sizes to accommodate a variety of flow rates.

Key Benefits

- Manufactured in England
- Available in a variety of sizes and styles
- In-house bespoke design service
- Designed to be durable and easy to clean
- Ideal for food grade environments
- Easy installation
- Suitable for light factory traffic
- Load Class up to FACTA B125
- Fitting and installation service available
- Maintenance & inspection contracts available
- Locking gully cover available
- Gully cover removal tools available
- Gully membrane flange disc available
- Gully basket available

Technical Specification

- 1.5mm and 2mm stainless steel plates
- 50mm water trap
- Grade 304 stainless steel (British Standard 304S31, Euronorm 1.4301)
- Square top gully with slotted cover
- Variable filtration mesh hole size available
- Range of matching gully covers available
- Range of back inlet pipes available

Drainage Systems

The Aqualine range keeps things flowing with hygienic, durable and low maintenance drainage solutions, suitable for use in food-grade environments.

Made from high quality stainless steel in our state-of-the-art facility, all Aqualine products are designed by our in-house engineers and manufactured in the UK.

In addition to a wide range of off the shelf options, we offer a bespoke design service, enabling us to customise and create products to meet any customer requirements.

Maintenance

Stainless steel equipment should be routinely checked for concentrated fluid build up, retained deposits and damage as these can lead to corrosion. If required, we are able to provide planned preventative maintenance programmes and inspections to ensure that drainage systems are in optimal operating condition.

Cleaning

All of our Aqualine range is designed to be easy to clean and maintain. The recommended cleaning methods include; steam, water, non-abrasive scrubbing, organic solvents and mild detergents. The frequency and specific cleaning method used will depend on the application of the drainage. All products should be routinely checked for damage.

Installation

Our dedicated installation team are capable of undertaking projects of any scale with assistance and expertise provided at every stage of the project. All installations adhere to our industry leading service standards, are handed over ready to use and include a high quality finish with welded and polished joints and commissioning included. Installation services are available on all product ranges and bespoke products.

Additional options

We offer a bespoke design service for our drainage systems to meet the requirements of your workplace or project.

To discuss a project, or bespoke design requirement, contact our technical sales department.
