

SURFACELINE

WALL CLADDING

Product Description

The Surfaceline range of stainless steel wall cladding provides a robust and aesthetic solution to safeguarding working environments.

Suitable for protecting walls, corners and vulnerable areas from collisions or damage. Ideal for environments that require high standards of hygiene.

| Model | Product Dimensions | |
|-------------------------------|--------------------|---------------------|
| | Sheet Thickness | Standard Sheet Size |
| DULL POLISHED STAINLESS STEEL | 0.9mm - 1.5mm | 2500 X 1250 |
| TREADPLATE ALUMINIUM | 0.9mm - 1.5mm | 2500 X 1250 |
| ENGINE TURNED STAINLESS STEEL | 0.9mm - 1.5mm | 2500 X 1250 |
| EMBOSSSED STAINLESS STEEL | 0.9mm - 1.5mm | 2500 X 1250 |

Key Benefits

- Manufactured in England
- In-house bespoke design service
- Designed to be robust and hardwearing
- Ideal for food grade environments
- Suitable for most applications
- Fitting and installation service available
- Maintenance & inspection contracts available

Technical Specification

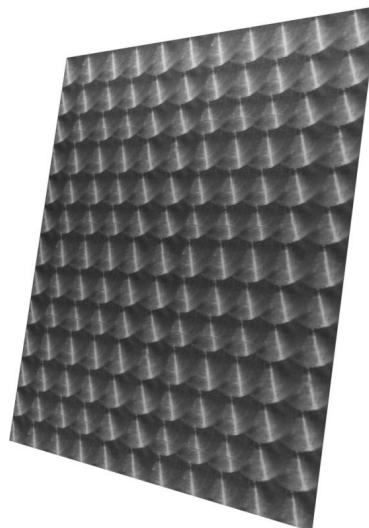

- Grade 304 stainless steel (British Standard 304S31, Euronorm 1.4301)

Surfaceline Systems

The Surfaceline range safeguards your environments with hygienic, durable and low maintenance protection solutions, suitable for use in food-grade environments.

Made from high quality stainless steel in our state-of-the-art facility, all Surfaceline products are designed by our in-house engineers and manufactured in the UK.

In addition to a wide range of off the shelf options, we offer a bespoke design service, enabling us to customise and create products to meet any customer requirements.

Maintenance

Stainless steel equipment should be routinely checked for concentrated fluid build up, retained deposits and damage as these can lead to corrosion. If required, we are able to provide planned preventative maintenance programmes and inspections to ensure that systems are in optimal operating condition.

Cleaning

All of our Surfaceline range is designed to be easy to clean and maintain. The recommended cleaning methods include; steam, water, non-abrasive scrubbing, organic solvents and mild detergents. The frequency and specific cleaning method used will depend on the application of the product. All products should be routinely checked for damage.

Installation

Our dedicated installation team are capable of undertaking projects of any scale with assistance and expertise provided at every stage of the project. All installations adhere to our industry leading service standards, are handed over ready to use and include a high quality finish with welded and polished joints and commissioning included. Installation services are available on all product ranges and bespoke products.

Additional options

We offer a bespoke design service for our Surfaceline systems to meet the requirements of your workplace or project.

To discuss a project, or bespoke design requirement, contact our technical sales department.
